SUMMARY

Mobile architect and Flutter/Android developer with 9+ years building production apps across fintech (UPI payments), HRMS, and civic-tech domains. Owns core, reusable module design adopted across multiple bank and enterprise apps, has led greenfield builds from architecture through App Store/Play Store release, and maintains codz-cli, an open-source developer CLI published on npm. Now seeking a Flutter Team Lead role to combine hands-on architecture ownership with mentoring and delivery leadership for a small mobile engineering team.

CORE STRENGTHS

Technical Leadership: Modular/plugin architecture, core-package design for multi-app reuse, cross-team API contracts, code review, onboarding & mentoring junior developers, project setup for new codebases.

Mobile Engineering: Flutter, Dart (BLoC state management), Android (Java/Kotlin), foundational iOS, RESTful APIs, SQLite, plugin development, secure payment flows (UPI/device binding), cross-platform CI/deployment (Play Store & App Store).

Domains: Fintech/payments, banking infrastructure, HRMS, travel & e-commerce, civic/government services.

EXPERIENCE

Senior Software Developer

Apr 2023 – Present

Network People Services Technologies — Noida

- Own architecture and delivery of Timepay, a UPI payments app with 10L+ (1M+) Google Play downloads, supporting instant transfers, UPI Lite, UPI Global, QR and Intent payments — built core login, registration, device-binding, and transaction API layers from the ground up.
- Designed and led build-out of a shared core package reused across the Kagb and Kgb bank apps (Karnataka and Kerala), cutting duplicated setup work and standardizing infrastructure across both codebases.
- Kicked off and drove the Mahindra Finance app from zero, including device registration and transaction-history modules, then built the plugin integrating Mahindra Finance functionality into the Mahindra Super App.
- Built multiple reusable plugins (camera scanning, contact management, network handling) adopted across the team's payment applications, reducing repeated implementation across projects.
- Acted as the go-to engineer for new-project setup and technical direction across multiple concurrent client apps — leading and mentoring a team of 3 developers on Flutter architecture patterns and code review standards.
- Leading app core setup, UI design, and project structure (Flutter, Dart, BLoC) for Hutch Super App, an in-development telecommunications super-app for the Sri Lankan market — establishing the architecture foundation the rest of the team builds on.

Flutter Application Developer

Jan 2022 – Apr 2023

Stellar Digital Pvt. Ltd — Gurugram

- As sole developer, built YAAMS, an HRMS app automating attendance tracking and daily task management, using Flutter, Dart, and Kotlin for cross-platform delivery.
- Took the app from build through Play Store and App Store release, owning the full submission and deployment process.

Senior Flutter Application Developer

Apr 2019 – Apr 2022

Srdv Technologies — Noida

- Built Chillontrip and FastbookTrip, two travel/booking apps (Flutter, Dart, SQLite), covering itinerary planning and end-to-end booking flows.
- Engineered the Deep Enterprise wine-selling app with cart and checkout functionality using Flutter and SQLite.
- Designed Sologo B2C and Sologo Partner B2B apps in native Android (Java), supporting two distinct user bases from a shared backend.
- Delivered King Holiday, a flights/buses/hotels booking app (Flutter, Dart, Kotlin), enabling instant multi-service bookings.

Android Application Developer — *Jan 2018 – Mar 2019*

Emag Technology — India

- Built MidSketch, a political networking app, in Kotlin on native Android, owning UX design, API integration, and performance tuning.

Android Application Developer — *Jun 2017 – Dec 2017*

VMC Management Consulting — New Delhi

- Delivered end-to-end UI and feature work for Swachh Dehradun, a civic engagement app for a government client, using Android/Kotlin.
- Improved functionality of an associated government reporting application.

Android App Development Intern — *Dec 2016 – May 2017*

AresourcePool — Noida

- Started mobile development career building and maintaining Java-based Android apps, laying the groundwork for a 9+ year specialization in mobile engineering.

OPEN SOURCE

codz-cli — Project-aware developer CLI (Creator & Maintainer) — *2026 – Present*

Open source (MIT) — npmjs.com/package/codz-cli | github.com/pradeep817/codz

- Built and published codz-cli on npm: a zero-dependency TypeScript CLI that generates API models, endpoints, screens, routes, mocks and tests in a project's existing architecture from OpenAPI, Swagger, Postman, HAR or cURL input.
- Supports Flutter (Riverpod, Bloc, get_it, GetX, Retrofit, freezed), Next.js, React (Vite), React Native, Android (Kotlin/Compose) and iOS (SwiftUI); every change is shown as a diff first and can be undone.
- Added API change tracking for teams (api sync / api diff with SARIF reports for CI), MCP support for AI agents, and a signed (Ed25519) starter catalog; covered by golden, fuzz and regression tests running in GitHub Actions CI.

EDUCATION

Master of Computer Applications (MCA) — Jaipur National University, Jaipur, Rajasthan
Bachelor of Computer Applications (BCA) — Kalinga University, Raipur, Chhattisgarh
